

# ZOOS

## Positives

Zoos provide a safe place for endangered species.

people can educate themselves about the animals by reading the text boards.

Zoos look after animals properly by giving them food and water and activities to do.

Animals are looked after by trained zookeepers that know a lot about that species of animal.

Animals live longer in the zoo because they are not getting poached down in the wild.

## Negatives

The animals are taken from their natural habitat so people can see them.

people don't read the information and they don't understand that the animals have been taken from their natural habitat.

Because animals can't move like they could in the wild they can get bored and stressed and try to escape.

This isn't a natural environment because in the wild the animals wouldn't see humans and might get scared.

Some studies show animals don't live longer in zoos and change their behavior.
